Mustafa Mehboob

Full Stack Software Engineer · Cloud Architecture · Backend

+92-311-4456240 | mustafaw3451@gmail.com | linkedin.com/in/mustafa-mehboob | github.com/mustafa-mx

Summary

Full Stack Software Engineer with **4+ years** building production SaaS across MERN, Next.js, and Django – from analytics platforms and e-commerce to multi-tenant backends. Owns systems end-to-end: **scalable APIs and data models**, **AWS cloud architecture**, CI/CD, and production incident response. Currently **leading a 3-engineer team**, architecting cloud infrastructure from scratch and driving a high-scale platform **past $1M in revenue**.

Experience

Software Engineer Jan 2026 – Present
Softaims *Lahore, Pakistan*

- **Led a 3-engineer team** building **UKVisaPortal** – a **TypeScript monorepo** (client / admin / shared) with **50+ REST endpoints** over a **39-table** PostgreSQL/**Prisma** schema – personally delivering **80%+ of features** and driving the platform **past $1M in revenue**.
- **Devised and implemented the entire AWS architecture from scratch**: a private **VPC** with **CloudFront VPC Origins** → private **ALB** → **ECS Fargate**, plus **RDS**, **Route 53**, **ACM**, and **AES-256-GCM**-encrypted documents in **S3** behind CloudFront **signed URLs**.
- Re-architected into a **hardened, breach- & DDoS-resistant** design (**AWS WAF** + **Cloudflare**/Turnstile/origin lock) and led **incident response** to a live **Layer-7 DDoS** – **blocked ∼600M of 700M requests** at peak while remediating a prior breach and **system-wide vulnerabilities**.
- Built the **Admin operations suite** (assignment queues, auto-assignment, call queue, shift/time tracking, **GDPR/DSAR**, Zendesk/Slack) and integrated **multi-provider payments** (Adyen, MamoPay, PayPal), **SendGrid** email, **CI/CD**, and JWT/4-role **RBAC**/MFA.

Associate Software Engineer Feb 2022 – Dec 2025
OptimaGeeks (Staff Augmentation Before Webmended, UAE · Feb 2022 – Feb 2024) *Johar Town, Lahore*

- Led **Userbird** – a **Google Analytics + PostHog-style** product-analytics & **session-replay** platform with an injectable JS SDK capturing pageviews, custom events, and **session recordings**; React/Vite dashboard on Cloudflare Pages backed by **BigQuery**, **40%** faster via caching/lazy loading.
- Led **mDrive Asia** e-commerce (Next.js + Django/PostgreSQL) with NextAuth, Apple GSX, and custom payment APIs – a full storefront and admin, from checkout to fulfilment.
- Built a LinkedIn Sales Navigator **Chrome Extension** (React/TS) syncing leads to **Captely CRM**, and **WP Post Automation** (PERN, Node Cron, RankMath) for AI-generated WordPress publishing.
- Shipped **6+ production apps** spanning **AGCRM** (OpenAI HTML-to-Markdown), a Revolt chat bot on **Cloudflare Workers**, a **NestJS** backend (CuddleClones), a Django **QMS** (CeleryBeat), and a YouTube live recorder (**yt-dlp, FFmpeg**); deployed via **Docker, PM2, Nginx**.

Projects

ukvisaportal.com – UK Visa Application Platform | *Node.js, TS, PostgreSQL, Prisma, Redis, AWS (VPC/ECS/S3/WAF/CloudFron*

- Client portal + dedicated **Admin panel** handling visa applications end-to-end – assignment queues, auto-assignment, call queue, time/session tracking, email tracking, DSAR deletion, and **AES-256-GCM**-encrypted PII on S3 – on a self-built **private-VPC / ECS Fargate / CloudFront / WAF / Cloudflare** stack; **origin lock** + **Turnstile** hardening let it withstand and mitigate a live **L7 DDoS** with zero data loss.

Userbird – Product Analytics & Session Replay | *React, Vite, BigQuery, Node/TS, TailwindCSS, Cloudflare Pages* Jun 2025

- Product-analytics & **session-replay** SaaS in the vein of **Google Analytics + PostHog**: an **injectable JS SDK** streams pageviews, custom events, and **session recordings** into a **BigQuery** pipeline, surfaced through a real-time React/Vite dashboard on **Cloudflare Pages** with **40%** faster retrieval via caching and lazy loading.

Mirai – Work Management Suite | *React, TypeScript, Node, Express, Prisma, PostgreSQL, Socket.io, Redis* May 2025

- **ClickUp-style** work-management platform – task boards, docs, real-time chat, voice notes, and AI assistance across a **workspace/team/organization** hierarchy; board-level **RBAC** with **Redis** for low-latency authorization and **Socket.io** for live sync.

Technical Skills

Languages: TypeScript, JavaScript, Python, C/C++, Java, SQL **Databases**: PostgreSQL, MongoDB, MySQL, Redis, BigQuery
Frameworks: Node.js, Express.js, NestJS, React.js, Next.js, Django, Prisma, Socket.io, Redux, Zustand, Tailwind
Cloud & DevOps: AWS (VPC, EC2, ECS Fargate, S3, RDS, ALB, CloudFront + VPC Origins, Route 53, WAF/WAFv2, ACM, Shield), Cloudflare (WAF, Rulesets, Transform Rules, Turnstile), GitHub Actions CI/CD, Docker, PM2, Nginx
Security: L7/DDoS mitigation, WAF rule engineering, AES-256-GCM encryption at rest, CDN signed URLs, origin lock, rate limiting, JWT/RBAC/MFA, GDPR/DSAR, incident response
Concepts: REST APIs, Microservices, Multi-tenancy, Webhooks, Async I/O, Cron Automation, OOP, DSA

Education

Government College University Lahore (GCUL) Lahore – CGPA 3.18
Bachelor of Sciences in Computer Science (BSCS) *Nov 2021 – May 2025*
